NCI CGAP FTO is a cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages challenged with different treatments. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CNA synthesis was primed with an oligo-dT primer containing a Not 1 site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I; and cloned directionally into pT713-pac vector. The oligonuleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCATGCGC. The cell line was provided by Gary W. Hunninghake from the University of

NCI CGAP_FTI is a normalized cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages challenged with different treatments. The library was normalized according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996 First strand CDNA synthesis was primed with an oligo-off primer containing a Not I site. Double stranded cDNA was ligated to an ECCR I adaptor, digested with Not I, and cloned directionally into prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dI)18 tail. The sequence rag for this library is GGCCATGCG. The University of Iowa.

NCI CGAP FTI is a normalized cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages
challenged with different treatments. The library was normalized according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site.
Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is dignally and the first strand was provided by Dr. Gary W.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Unpublished (1997)

NCI CGAP_FTO is a cDNA library constructed from a pool of NCI CGAP_FTO is a cDNA library was constructed from a pool of SI RNA samples from Alveolar Macrophages challenged with different treatments. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  first-strand cDNA contains a library tag sequence that is located between the Nor I site and the (dI)18 tail. The sequence tag for this library is GGCQATGCCG. The cell line was provided by Gary W. Hunninghake from the University of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TITATAAAIGAGCAAATAIGATACIGITCAAIGGITCIGAAAIAAACITCACIGAAGAAA 600

NCI CGAP FT0 is a cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages challenged with different treatments. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with an oligo-dT primer containing a Not I site. Double first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCATGCCC. The cell line was provided by Gary W. Hunninghake from the University of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AACAGAAAGGTTTTTGAGTACGGCTATAGCCTGGACTTTCCTGTTGTCTACACCAATGCC 120

/ NCI CGAP_FTO is a cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages challenged with different treatments. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, e:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dr primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I; and cloned directionally into PT73-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCATGCCG. The cell line was provided by Gary W. Hunninghake from the University of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Contact: Robert Strausberg, Ph.D.

/modified polylinker; Site l: EooR I; Site 2: Not I;
Mort Cape FTT is a normalized cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages
challenged with different treatments. The library was normalized according to Bonaldo, Lennon and Soares, Genome Research, 6: 791-86, 1996. First strand cDNA synthesis was normalized according to Bonaldo, Lennon and Soares, Genome Research, 6: 791-86, 1996. First strand cDNA synthesis was primed with no ligo-dT primer containing a Not I site.
Double stranded cDNA was ligated to an EooR I adaptor, digested with Not I, and cloned directionally into pyT73-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCAPGCG. The University of Iowa.

Hunninghake of the University of Iowa.

/clone Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT73-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the CGT) B tail. The sequence tag for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CTACTCACTTAAAGCCCGCCTGACAGAAACCACGCCACATTTGGTTCTAAGAAACCCTC 312

/clone_lib="nci Fibrosarcoma Cell line HT-1088 (ATCC number CCL-121). The library was constructed according to Bonaldo, lennon and Soares, Genome Research, 6:791-806, 1996. First strand containing a Not I site Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonacleotide used to prime the synthesis Pac vector. The oligonalcetide used to prime the synthesis of first-strand contains a library tag sequence that is located between the Not I site and the (dT) l8 tail. The sequence tag for this

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         à
/note="Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR 1; Site_2: Not 1; Not 1: CGAP FT0 is a cDNA library constructed from a pool of 81 ENA samples from Alveolar Macrophages challenged with different treatments. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dfr primer containing a Not 1 site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not 1, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (df)18 tail. The sequence tag for this library is GGCOATGCGG. The cell line was provided by Gary W. Hunninghake from the University of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300

modified polylinker; Site_1: ECOR I; Site_2: Not I; NOT ICAPP DHI is a normalized CDNA library containing the following tissue(s): vS-8 Cell line from Metastatic chondrosarcoma in Lung. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT):18 tail. The sequence tag for this library is AGATCATGC.

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Two basic sequences that could be sites for protein processing, similar to those observed for peptide hormones, are found at positions 708-716 and 723-728.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                    US-09-247-874C-2_COPY_8710_8945

The present sequence is that of human interleukin-1 beta (IL-IB) allele 2 (+6912), which is a form of the IL-IB gene that contains guanine at position (see AAA50124). The invention is based on the identification of this novel allele at marker +6912 of the IL-IB gene. The C to G translation occurs within the 3 untranslated region of the IL-IB gene and results in an increased level of IL-IB protein. Individuals homozygous for the IL-IB allele 2 (+6912) crowided for detecting IL-IB allele 1 (+6912). Methods and kits are provided for detecting IL-IB allele 2 (+6912), or an allele in than homozygotes for IL-IB allele 2 (+6912), or an allele in the Inkaged eisequilibrium with an IL-IB allele 2 (+6912), and thereby determining a patient's susceptibility to developing inflammatory disorders, especially coronary artery disease, oreopozosis, nephropathy in diabetes mellitus, alopecia areata, divenile chronic arthritis, psortasis, insulin dependent diabetes, asthma, chronic arthritis, psortasis, insulin dependent diabetes, asthma, chronic inflammatory liver disease, ch

This is the 3' UTR of interleukin 1-beta mRNA which contains AU-rich element (ARE) motifs. These ARE motifs are found in genes subject to mRNA instability. Identification of a compound which affects mRNA stability comprises a DNA expression system which in the absence of the test compound is capable of expressing a protein having a detectable signal. The mRNA which codes for the protein, and which is transcribed from the expression system, comprises at least one copy of a mRNA instability sequence. The mRNA is contacted with a test compound and the detectable signal is measured in the presence of the test compound and compared with a control. Compounds identified by the new method can be used for the treatment of a disease or medical condition which involves inappropriate mRNA stabilization and/or accumilation and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying compounds which affect mRNA stability for the treatment of disease e.g. arthritis comprises a DNA expression system expressing a protein having a detectable signal

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and crivating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Low adenosine antisense oligonucleotide; phosphorothioate, allergy; human; airway disorder; bronchoconstriction; lung inflammation; surfactant depletion; respiratory; bronchodilator; antihilammatory; immunosuppressive; antiasthmatic; analgesic; hypotensive; cytostatic; respiratory obstruction; pulmonary obstruction; impeded respiration; surfactant hypoproduction; pulmonary vasoconstriction; asthma; RDS; respiratory distress syndrome; panh; cystic fibrosis; allergic rhinitis; pulmonary hypertension; emphysema; pulmonary transplantation rejection; chronic obstructive pulmonary disease; pulmonary infection; bronchitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       receptors, CNS and peripheral nervous and non-nervous system peptide transmitters. defensings, growth factors, vascactive peptides and receptors, binding proteins and mailgnancy associated proteins and mailgnancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or

       The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which transpers nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antininflammatory, antiallergic, antialmention, antialmention, antialmention, antialmention, antialmention, antialmention, antialmention are useful for the treatment of diseases associated with inflammation. The COM can have antininflammatory, antiallergic, antialment of impaired airways, including lung disease associated with inflammation, effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the relaction of adexyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA33313 to AAA33312 represent the nucleotide sequences given in the sequence listing from the present intention, which correspond to SEQ ID NO:11 to 16% but the sequences differ from the previously named sequences. SEQ ID NO:11 to 16% invention, and inflammation, and with their corresponding SEQ ID NO: sequences in the sequence of the present invention do not match up with their corresponding SEQ ID NO: sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

The present invention describes genotyping a nucleic acid sample from a subject to determine at least one allele of an interleukin-1 (IL-1) prolifiammatory haplotype. A method has also bee described for determining a subject's susceptibility to developing chronic obstructive airway disease (COAD) or for predicting the rapidity or ultimate progression of a COAD in the subject; by: (a) obtaining a mucleic acid sample from the subject, and (b) detecting at least one allele of an IL-1 proinflammatory haplotype in the sample, where detection of at least one of these alleles indicates that the patient has an increased susceptibility to developing COAD. The method is useful for determining the susceptibility of subjects to developing chronic obstructive airway disease or for predicting the rapidity or ultimate progression of chronic obstructive airway disease (COAD). COAD can be asthma, emphysema, chronic bronchification of chronic obstructive airway disease (COAD), carriage, thereby increasing the probability of a positive outcome. The stage, thereby increasing the pubmbility of a positive outcome. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Low adenosine antisense oligonucleotide; phosphorothioate; allergy; human; airway disorder; bronchoconstriction; lung inflammation; surfactant depletion; respiratory; bronchodilator; antiinflammatory; immunosuppressive; antiasthmatic; andlgesic; hypotensive; cytostatic; respiratory obstruction; pulmonary obstruction; impeded respiration, surfactant hypoproduction; pulmonary vasoconstriction; asthma; RDS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8830 AAGTCCTTTAATTAAGACTGAAAATATATAAGCTCAGATTATTAAATGGGGAATATTTAT

Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions

Disclosure; Page 230-232; 1592pp; English.

oligonucleotides and compositions (1) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. It can have respiratory, bronchodilator, antiniflammatory, analgesic. immunosuppressive, antiathmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (1) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific and confession molecules and chemokine receptors, adhesion molecules and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, CNS and peripheral nervous and non-nervous system peptide transmitters, defensints, growth factors, vascative peptides and receptors, binding proteins and maingnancy associated proteins. The antisense oligonuclectides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allegies, asthma, impeded respiration, respiratory discress syndrome (RDS), pain, cystic fibrosis (CP), allergic thinitis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or cancer. AAF1843 to AAF21843 represent human polymuclectide fragments and antisense oligonuclectides used in the exemplification of present invention describes low adenosine (A) content antisense the present invention.

. 0 The present sequence is provided in a specification relating to a method for determining whether a subject has or is predisposed to develop an interstital lung disease. The method involves detecting an interleukin-1 receptor antagonist (IL-IRN) (+2018) allele 2, a tumour necrosis alpha (TNF-A)(-308) allele 2, or an allele in linkage disequilibrium with either of these two alleles. The method may be used to determine whether a subject has or is predisposed to develop an interstitial pneumonia or applementy fibrosis and other disorders such as rheumatoid arthritis, systemic lupus erythmatosis, Sjognen's syndrome, systemic sclerosis, dermatcomyocitis. The method is also used for identifying molecules which can be used as therapeutics for treating interstitial lung disease. comprising Human, IL-1B; interleukin-1B; cytostatic; antiinflammatory; immunosuppressive; dermatological; antimicrobial; antiarthritic; IL-1 receptor antagonist; tumour necrosis factor alpha antagonist interstitial lung disease; interstitial pneumonia; pulmonary fibrosis; rheumatoid arthritis; systemic lupus erythmatosis; Sjogren's syndrome; systemic sclerosis; dermatomyocitis; chromosome 2; ds. 8830 AAGTCCTTTAATTAAGACTGAAAATATATAAAGCTCAGATTATTTAAATGGGAATTAT 8889 8710 TTTTGATTCATTGGTCTAATTTATTCAAAGGGGGCAAGAAGTAGCAGTGTCTGTAAAAGA 8769 GCCTAGTTTTTAATAGCTATGGAATCAATTCAATTTGGACTGGTGTGCTCTCTTTAAATC 120 Gaps 1 TITIGATICATIGGICTAATITATICAAAGGGGCCAAGAAGTAGCAGIGTCTGTAAAAGA 60 Method for predicting the risk of interstitial lung disease, compidetecting an interleukin-1 receptor antagonist allele and tumor necrosis alpha allele or an allele in linkage disequilibrium with ; Length 9721; Indels Sequence 9721 BP; 2661 A; 2328 C; 2122 G; 2608 T; 2 other; Query Match 82.2%; Score 194; DB 21; Best Local Similarity 100.0%; Pred. The invention is based on the identification of this novel allele at marker +6912 of the IL-1B gene in the IL-1B gene and results in an increased level of IL-1B protein. Individuals homozygous for the IL-1B allele 2 (+6912) and proximately 4 times more immunoreactive IL-1B protein than homozygotes for IL-1B allele 1 (+6912). Methods and kits are provided for detecting IL-1B allele 2 (+6912), or an allele in thereby determining a patient's susceptibility to developing inflammatory disorders, especially coronary artery disease,

osteoporosis, nephropathy in diabetes mellitus, alopecia areata, Graves disease, systemic lupus erythematosus, lichen sclerosis, ulcerative colitis, diabetic retinopathy, periodontal disease, juvenile chronic arthritis, psoriasis, insulin dependent diabetes, asthma, chronic inflammatory liver disease, chronic inflammatory lung disease, lung fibrosis, and rheumatoid arthritis (claimed). Identification of the IL-IB allele 2 (+6912) and its involvement in IL-IB overproduction also eables screening assays for identifying IL-IB antagonists that can be used to treat conditions associated with IL-IB allele 2 (+6912). Transgenic animals are also claimed, and can be used to identify IL-IB agonists and antagonists, or to confirm the safety and efficacy of candidate therapeutics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstriction, inflammation, allergies, asthma, hypertension,

The present invention describes a new composition comprising an anticanse oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antinflammatory, antiallergic, antisathmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects affiliat the lungs of a subject. They can be used for treating effects affiliat the lungs of a subject. They can be used for treating effects affiliat the lungs of a subject. They can be used for treating effects affiliate the lungs of a subject. They can be used for treating effects affiliate the lungs of a subject. They can be used for treating esthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including the own reduces side effects. The reduction of the adenosine content of the own reduces side effects. The Acontaining ONS break down with the release of decoxyadenosine which activates adenosine receptors causing and inflammation. AAA33312 to AAA33312, represent the mind of the adenosine repeace the adenosine content the mind of the adenosine receptors causing and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last differ trom the previously named sequences. SEQ ID NO:1 to 185, but the sequences (AAA32323 to AAA33922) are specifically claimed ONs from the present invention. NB. Sequences given in the disclosure of the present invention. NB. Sequences given in the disclosure of the present given in the sequence listing.

The present invention relates to a new method for determining whether a subject has or is predisposed to developing a disease or condition that is associated with an IL (interleukin)-1 inflammatory haplotype, comprises detecting at least one allele of the haplotype, where the presence of the allele indicates that the subject is predisposed to the method is useful for determining whether a subject has or is predisposed to inflammatory disease, a degenerative disease, an immunological disorder, an infectious disease, trauma induced disease, or cancer. The above conditions associated with an IL-1 inflammatory that compensates for a causative mutation that is in linkage diseapled disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GCCTAGTTTTTAATAGCTATGGAATCAATTCAATTTGGACTGGTGTGCTCTCTTTAAATC 8829

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a method for evaluating and treating risk of unexplained recurrent pregnancy loss (URPL) in a subject suspected of having immunologic reproductive failure. The method involves testing a sample obtained from the subject for the presence of a variant in the human interleukin-lbeta (IL-lbeta) promoter region, and/or a variant in the CD46 gens inron I region, where the presence of the variant indicates an elevated risk of developing recurrent pregnancy loss. The present sequence is human prointerleukin-1 beta (IL-1 beta) gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GCCTAGITTTTAATAGCTATGGAATCAATTCAATTTGGACTGGTGTGCTCTCTTTAAATC 120

The method comprises detecting a restenosis associated allele (RAA) in a nucleic acid sample from the subject, where detection of the RAA indicates that the subject has or is predisposed to the development of a restenosis. The restenosis associated allelic diagnosis of occlusive cardiovascular disorder. The diagnosis allows the most suitable treatment methods for restenosis to be used e.g. selecting therapies for initial vascular stenosis most likely the available to avoid subsequent stenoses. The detection methods identify restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Unexplained recurrent pregnancy loss; immunologic reproductive failure; URPL; prointerleukin-lbeta; IL-lbeta; human; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              therapeutics, agonists and antagonists, (proteins, peptides, peptidomimetics, small molecules or nucleic acids, e.g. anti-sense, ribozyme and triplex nucleic acids) which are used to treat restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8710 TTTTGATTCATTGGTCTAATTTATTCAAAGGGGGAAGAAGTAGCAGTGTCTGTAAAAGA 8769

Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions -

Disclosure; Page 221-227; 1592pp; English

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense cligonucleotides the A is replaced by a 'universal' or alternative base. (I) can have respiratory, bronchodilator, antinflammatory, analgesic, immunosuppressive, antisathmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, contral nervous system (CNS) and peripheral nervous and non-nervous system peptide receptors, defensins, growth factors, vasoactive peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (specially pulmonary obstruction and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasociated with a disease of condition selected from pulmonary vasociated with a disease (CDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary transplantation rejection, pulmonary inflammation, emphysema, chronic obstruction, pulmonary distress syndrome the and antisense oligonucleotides used in the exemplification of the present invention. the present invention.

Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into PTT3-Pac vector. The oligoniclectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AGATCATTGC.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dr primer containing a Not I site. Double stranded cDNA was ligated come ECR I adaptor, digested with Not I, and cloned directionally into pT773-pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AGATCATGC.

/note="Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR i; Site 2: Not I; NOT (CAP_FSI is a CDNA library Containing the following tissue[6]: Fibrosarcoma Cell line HT-1088 (ATCC number CCL-121). The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the CMT3-Pac vector and contains a library tag sequence that is located between the Not I site and the CMT3-Fac vector tag for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Contact: Robert Strausberg, Ph.D.

[hote="Organ: lung, Vector: pT773D-Pac (Pharmacia) with a modified polylinker; lst strand cDNA was prepared from pooled lung tumor tissue, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization. Library constructed by Bento Soares and M.
